Web developer with a technical support background.
Skilled in creating solutions to challenging problems.

Web Development

CareerFoundry / Full-Stack Development Project
June 2020

- Intensive project-based training program with a focus on Full-Stack Development
- Created an API and responsive Front End Application using the MERN stack that users can create a profile, login with JWT, and update or delete their profile
- Used Angular to create a responsive front end application to interact with my API
- Built a messaging app with React Native and Firebase
- Created a meetup app with serverless functions and OAuth where users find events in their area neatly displayed using Recharts data visualization tools

See the project on GitHub:
